HTML file

This is a HTML code for a website with a navigation bar, a container for an image, a slider, and a section for different skills. Additionally, it has a contact form and a footer. The code also includes CSS styling links, and uses of the grid system and font-awesome for icons.

File Structure

This HTML file is linked to an external CSS file named "folio.css" which defines the styles for the various elements on the page. It also includes several image files in the 'images' folder.

Features

- Navigation bar with links to various sections on the page

- Image container with a centered text

- Image slider using the <figure> and <img> tags

- Contact form using the <form> tag and input validation using the pattern attribute

- Footer with social media icons using font-awesome

- The code contains comments for better understanding

How to use

- Clone or download the repository

- Open the index.html file in a web browser to see the webpage

- Make any necessary changes to the HTML and CSS files to customize the webpage

- Use the images folder to add your own images

- Make sure all the links are correct and images are loaded properly.

- Host the files on a web server or use a localhost for testing.

CSS file

This is a CSS code t that includes various styling for different HTML elements such as margins, padding, width, display, font-size, color, etc.

Usage

To use this CSS code, you need to include it in your HTML file using a <link> tag, or you can include it within a <style> tag in the <head> section of your HTML file.

Explanation

- The first line of the code sets the margin and padding for all elements to 0.

- The .wrapper class sets the width of the element to 100%.

- The .img-banner class has a display property set to none, which means that it will not be displayed on the page.

- The .img_info class sets the width of the element to 100%.

- The .img_info2 h2 class sets the padding, font-family, font-size, color, and line-height for h2 elements within the .img_info2 class.

- There are also several media queries included in the code. These media queries change the styles of certain elements based on the width of the screen. For example, when the screen width is greater than or equal to 786px, the .img-banner class will have a display property of block and a width of 100%. When the screen width is less than or equal to 600px, the .column class will have a width of 100% and a padding of 15%.

- Sets the font-size and font-weight of the logo link

- Changes the background color of the header on mouse-over

- Uses media queries for responsiveness, adjusting the layout of the elements on smaller screens

- Styles the active/current link with a different background color and text color

- Floats the link section to the right

- Centers text using the transform: translate(-50%, -50%) property

- Adds a frame class

- Changes the background color of the body on smaller screens
